

PROJECT REQUIREMENTS DOCUMENT

Project Name	BookExchange
Functional Requirements	FR1: Post Book Listing - Users shall be able to post a book for sale by entering title, author, course code, condition, price, and contact information. FR2: Browse Listings - Users shall be able to view all available book listings in a grid layout. FR3: Search Books - Users shall be able to search for books by course code or title with case-insensitive matching. FR4: View Details - Users shall be able to view complete details of a book including seller contact information. FR5: Mark as Sold - Users shall be able to mark their listing as sold, which removes it from the browse page. FR6: Delete Listing - Users shall be able to permanently delete their book listing.
Technical/Performance Requirements	TR1: Technology Stack - The system shall be built using HTML5, CSS3, and vanilla JavaScript with no frameworks. TR2: Data Storage - The system shall use browser LocalStorage for data persistence. TR3: Responsive Design - The interface shall be responsive and work on desktop and mobile browsers. TR4: Performance - Pages shall load in under 2 seconds on standard internet connections. TR5: Browser Compatibility - The system shall work on Chrome, Firefox, Safari, and Edge (latest versions). TR6: Data Validation - All form inputs shall be validated before saving to prevent invalid data.
